

Lesson Plan: Angelus Leather Paints

Just the basics

This leather paint is ideal for painting boots, jackets, athletic shoes, purses and more. When properly applied it will not crack, peel, fade or rub off.

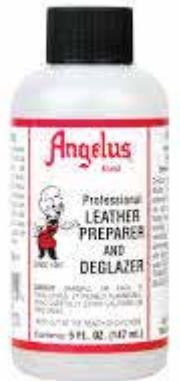

The paint is **non-toxic and water-based** for easy clean up.

These are easy to use and can be blended together for countless custom colors even the metallics can be blended with standard colors.

It can be applied with a brush, sponge or airbrush (some thinning may be required for airbrush application).

Prior to applying paint:

1. Make sure your surface is clean, dry, free from dust, etc.
2. Use the Leather Preparer & Deglazer on your piece of leather to prep the surface
 - Use a cotton ball or pad to apply
 - Note: Cotton balls/pads will soak up a lot of the Preparer & Deglazer. Once soaked you can use this on a pretty big surface
3. Apply in light /thin coats to achieve full and even coverage.
 - Allow each coat to dry before apply another layer.
4. Allow paint to dry for at least 24 hours before allowing paint to bend or flex.
5. You can blend with a brush to produce fades or mix colors.
6. There are additives for various applications:
 - “2-Thin” is for thinning paint for airbrush application.
 - “2-Hard” is for harder plastic areas to help adhesion and scuff protection
 - “2-Soft” is for making our paint soft and launderable for cloth, canvas, and other soft material.
 - There are other additives which are featured on the Angelus Paint. Angelus website: <https://angelusdirect.com/>
 - And, there are tons of videos on YouTube.
